2007 State Plan
for the
California Health Facility Construction
Loan Insurance Program

Introduction and Purpose

Created in 1969 and modeled after federal home mortgage programs, the California Health Facility Construction Loan Insurance Program (**Program**) enables public and nonprofit healthcare facilities to obtain private financing, without cost to taxpayers, to develop or expand their services in communities throughout California.

The Program's objective is to stimulate the flow of private capital into nonprofit and public health facility construction in order to assure accessibility to needed healthcare.

With the passage of AB 282 in October 1999, amendments to Section 129020 of the Health and Safety Code require the Office of Statewide Health Planning and Development (**OSHPD**) to develop a state plan every odd-numbered year for the Program. (See **Exhibit 1**.)

In this State Plan (**2007 State Plan**), OSHPD provides a summary of the Program, identifies current trends that affect the Program, and specifies goals and objectives in order to continue to focus the Program on equitable healthcare accessibility for California.

The contents of this State Plan were prepared to be current as of January 1, 2007, unless specifically stated otherwise.

Section I. Status Report of the Loan Insurance Program

A. History of the California Health Facility Construction Loan Insurance Program - First Thirty-Eight Years

The California Health Facility Construction Loan Insurance Program (**Program**) was authorized in 1968 by an initiative vote, which added the following section to the State Constitution (reference Article 16, Section 4):

"The Legislature shall have the power to insure or guarantee loans made by private or public lenders to nonprofit corporations and public agencies, the proceeds of which are to be used for the construction, expansion, enlargement, improvement, renovation or repair of any public or nonprofit hospital, health facility, or extended care facility, facility for the treatment of mental illness, or all of them, including any outpatient facility and any other facility useful and convenient in the operation of the hospital and any original equipment for any such hospital or facility, or both."

Legislation enabling the Program was passed by the Legislature in 1969.

Modeled after federal home mortgage programs, the Program makes it possible for nonprofit healthcare facilities to obtain private financing without cost to taxpayers to develop or expand their services in communities throughout California. Without such a guarantee, many of these facilities simply could not arrange the financing required to serve their communities.

Under the administration of the Office of Statewide Health Planning and Development (**OSHPD**), the California Health Facility Construction Loan Insurance Program insures loans to nonprofit and public health facilities for construction projects that improve access to needed healthcare. OSHPD can insure loans to nonprofit public benefit corporations or public entities (cities, counties, hospital districts, or joint power authorities) in which the State of California guarantees the payments of principal and interest on the loans. The loan insurance allows access to lower interest rates, similar to the tax exempt bond rates available to the State. (See **Exhibit 2**.)

The California Health Facility Construction Loan Insurance Law established the Health Facility Construction Loan Insurance Fund (**Insurance Fund**). The Insurance Fund is used as a depository of fees and insurance premiums and may be used to pay administrative costs of the Program and shortfalls resulting from defaults by insured borrowers. As a trust fund, the Insurance Fund and the interest (or other earnings) generated may not be used for non-Program purposes.

The Program was validated by the California Supreme Court in 1971, which determined that both the Constitutional amendment and the enabling legislation creating the Program were constitutional.

In 1972, OSHPD insured its first loan with the full faith and credit of the State guaranteeing the loan.

The enabling legislation required OSHPD to develop a plan and allocate loan insurance based on its findings, so that needed facilities would be constructed or expanded. OSHPD originally used Hill-Burton planning documents as the Plan.

In 1976, the Certificate of Need laws were enacted, which required health facilities to go through an independent review process to assure that community need existed for the project prior to construction. During the years the Certificate of Need program was active, the statutes were amended to delete the separate planning requirement. In 1979, the statutes were revised to require that a Certificate of Need or a Certificate of Exemption be obtained as a condition to eligibility for loan insurance.

When the Certificate of Need program was suspended in 1987, OSHPD requested the California Health Policy and Data Advisory Commission (**CHPDAC**) form a task force to assess the continuing need for the Program. While the task force concluded that the Program performed a valuable function, it recommended that: (1) there should be a total dollar cap on the Program, that could be re-evaluated periodically by the Legislature; and (2) the Program should be guided by some kind of non-regulatory state plan.

OSHPD sought legislation to implement these two recommendations. Senate Bill 1293, passed in 1989, established the requirement for OSHPD to develop a state plan and allocate resources according to that state plan. At the same time, a \$2 billion cap was established on loan guarantees.

In 1991, legislation raised the cap on loan guarantees to \$2.5 billion. It also provided that the cap could be raised to \$3 billion, with the completion of a state plan. The first State Plan was finished in July 1992. Effective January 1, 1993, the amount that OSHPD was authorized to insure was raised to \$3 billion.

In September 1993, Triad Healthcare Corporation (**Triad**) defaulted on an insured loan of \$167 million. Due to this large default, OSHPD declared a moratorium on new applications. A review of the Program found that OSHPD still could continue to meet the requirement that the Program be administered without cost to the State. Due to the findings of this review, the moratorium was lifted and OSHPD began accepting new applications in May 1994.

From the Loan Insurance Program's inception, the Advisory Loan Insurance Committee (**ALIC**) has been utilized to review loan insurance applications,

including Cal-Mortgage staff analyses, and to make recommendations to the OSHPD Director. The ALIC has been comprised of public and government members with expertise in financing, health planning, construction, and healthcare facility operations.

During the moratorium, the Advisory Loan Insurance Committee (**ALIC**) was restructured. OSHPD appointed new members to the ALIC, including a representative from the Department of Finance. In 1995, regulations were amended to increase the number of members on the ALIC from seven to nine.

In order to strengthen OSHPD's ability to deal with facilities in serious financial trouble, Senate Bill 1705 was passed in September 1994. This bill gave OSHPD authorization to assume or direct managerial control of borrowers in default.

In October 1998, a report by the California State Auditor identified opportunities to improve the review of applications and the monitoring of insured borrowers. OSHPD has implemented the recommendations made in the Auditor's report. The most significant accomplishments include: (1) establishing written guidelines for the review of loan applications; (2) customizing financial analysis software to analyze an applicant's financial performance; (3) upgrading and reprogramming the project database to assist the staff and Program management in monitoring borrowers; and (4) preparing, in conjunction with OSHPD Accounting staff, an ongoing report of assets and liabilities related to defaulted projects.

During the 1998-1999 Legislative session, a cooperative effort by the State Legislature, the State Auditor's staff, and OSHPD staff resulted in passage of AB 282 (Chapter 848, Statutes of 1999). The statutes made changes to improve the Program. They (1) authorized a one-time, up-front insurance premium; (2) established, in law, the Advisory Loan Insurance Committee with expanded responsibilities; (3) required preparation of a biennial State Plan; and (4) required preparation of annual reports to the Legislature.

B. Developments Since the Prior State Plan

1. Changes in the Program's Portfolio

Since the prior State Plan, the Program's insured loan portfolio declined 5% to slightly less than \$1.3 billion (**Exhibit 13**). The number of insured loans decreased to 149 from 171 (**Exhibit 14**).

The decrease in the number of insured loans is linked to the decline in interest rates. Borrowers were able to refinance out of the Program and achieve lower interest costs (generally from about 7% to below 6%). Over the last two years, fifteen projects refinanced and left the Program. Six other borrowers paid off their debt. When these borrowers (with loans insured before 2001) paid off their

loans, their annual insurance premiums were eliminated. Even though 21 projects left the Program during this two year period, these projects were relatively small, with an average principal balance of less than \$3 million. Also, during this two year period, few new projects were insured, but the average insured loan amount was greater. One newly insured loan for a continuing care retirement center at \$42 million was greater than all the projects that left via refinancing or pay off.

In summary, the profile of the insured portfolio, based upon the number of projects by type, remained relatively unchanged between June 2001 and June 2006. (See **Exhibit 16.**) Similarly, based upon the insured loan amount, the profile remained relatively unchanged. (See **Exhibits 8 & 17.**)

2. Implementation of Priority Needs Identified in the Prior State Plan

The 2005 State Plan established certain priorities, which are indicated in the following summary listing. Loan insurance activities have reflected those priorities. From July 1, 2004 through June 30, 2006, OSHPD insured 16 projects. (Please note: Since a project may address more than one priority area, the combined total of all priority areas exceeds 16.)

- 1) Three projects were in medically underserved areas or serve medically underserved populations.
- 2) No projects involved compliance with hospital seismic safety standards (SB1953).
- 3) One project enhanced the actuarial stability of the Program.
- 4) Ten projects targeted special needs populations and created community-based treatment environments: four projects for the elderly, three projects for persons with mental or developmental disabilities, and three projects for persons needing substance abuse therapy.
- 5) Two projects promoted access to primary care services.
- 6) Seven projects provided solutions to healthcare delivery problems in rural areas, for patients with chronic health problems, or by developing continuums of care.
- 7) Thirteen projects included opportunities to refinance debt and reduce the borrower's risk to the Program's insurance fund.

Exhibit 5 shows the projects that were insured from July 1, 2004 to June 30, 2006.

3. Changes to the Fund Balance of the Loan Insurance Program

The Fund Balance (refer to **Exhibit 3**) is determined by taking the cash balance, adding the value of assets (obligations due to OSHPD for defaulted projects), and subtracting the liabilities (obligations of OSHPD for defaulted projects). The Fund Balance of the Program decreased from \$93.9 million on June 30, 2004, to \$63.2 million on June 30, 2006, because the cash balance decreased by \$9.8 million and obligations to OSHPD declined by \$31.0 million.

a. Changes to the Insurance Fund Cash Balance

The Insurance Fund cash balance decreased by \$9.8 million for two reasons: lower volume of newly insured loans and lower interest earnings on the Fund.

In the four fiscal years, 2000 through 2004, the Program had annual insured loan volume averaging \$173 million. In the past two fiscal years, the average insured loan volume was \$58 million. The decline occurred principally because of declining interest rates in the economy. Healthcare facilities were able to finance projects without loan insurance. Also, it was a period when many borrowers refinanced and left the Program.

With lower interest rates in the U.S. economy, earnings were lower. In 2004, the Fund earned less than 2% from the State's Surplus Money Investment Fund (SMIF). Since then short term rates have increased significantly to almost 5%. The Fund earnings in FY 2004 were under \$3 million. For FY 2007, they are expected to be over \$8 million.

b. Changes to the Obligations to OSHPD

Two problem situations were resolved by facility sales with corresponding write-downs of unrealized payment obligations to OSHPD.

When a borrower defaults and a bondholder payment is made by OSHPD from the Insurance Fund, this "advance" is recorded as a liability of the borrower to OSHPD. This "advance" is also recorded as a "receivable" and becomes an element of the Fund Balance total. As long as the healthcare facility operates, there is the expectation that the borrower may repay OSHPD. There is no objective reliable methodology (or valid mechanism consistent with accounting practices) to reassess the expected value of payment obligations once a turn-around does not seem probable. When the healthcare facility is sold, final adjustments are made to the outstanding OSHPD accounts. Any remaining unrealized payment obligations are written off. The impact is a reduction to the Program's Fund Balance.

Sierra Sunrise Senior Village in Chico (with two insured projects) was sold in April 2006. A portion of the "advances" by OSHPD from the Insurance Fund

were recovered in the sale. The unrealized payment obligation or write-down was \$5.0 million. The Program's Fund Balance was reduced correspondingly.

In a similar manner, the sale of Sherman Oaks Hospital and Health Center in December 2005 resulted in a write-down and a corresponding reduction of the Program's Fund Balance. Sherman Oaks had direct notes to OSHPD as a result of the Triad bankruptcy. When payments were missed (or partial payments made), the unpaid amount was recorded as a "receivable" or payment obligation to OSHPD. When Sherman Oaks was sold, the unrealized payment obligations and the unpaid principal balance of the notes were written off, totaling \$32 million. This had an accounting impact of reducing the Fund Balance. The use of the sales proceeds to reduce debt (and reduce interest costs) will enable OSHPD to spend less in future years for interest costs.

C. Description of Program Operations

1. Administration

As one of fourteen departments in the California Health and Human Services Agency, OSHPD's vision is "equitable healthcare accessibility for California." Its mission is to be a leader in analyzing California's healthcare infrastructure, promoting a diverse and culturally competent healthcare workforce, informing the public about healthcare quality, assuring the safety of buildings used in providing healthcare, insuring loans to develop healthcare facilities, and facilitating development of sustained capacity for communities to address healthcare issues.

OSHPD administers the California Health Facility Construction Loan Insurance Program through its Cal-Mortgage Loan Insurance Division (**Cal-Mortgage**). For FY 2006-07, the Cal-Mortgage Loan Insurance Division was authorized for 22 employees and an annual budget of \$4.6 million.

OSHPD uses the Advisory Loan Insurance Committee (**ALIC**) to provide technical review and analysis of applications. The ALIC independently recommends to the OSHPD Director regarding whether an application should be approved and whether conditions should be attached to the approval. The ALIC also assists the OSHPD Director in formulating policy and providing advice on the State Plan. The ALIC is comprised of nine members. Seven members are citizens with expertise in areas of finance, healthcare facility management, and construction. Two members are appointed from State government: one of which is appointed by the Director of Finance.

OSHPD is also assisted by the California Health Policy and Data Advisory Commission (**CHPDAC**). The CHPDAC gives OSHPD and the Cal-Mortgage Loan Insurance Division general advice by periodically reviewing the Program, providing advice on the State Plan, and serving as a review body for applicants

whose applications for loan insurance are denied by OSHPD. Since the Program's inception in 1972, one hearing has been requested and conducted.

The California Health Facility Construction Loan Insurance Law also established the Health Facility Construction Loan Insurance Fund (**Insurance Fund**). The Insurance Fund is used as a depository of fees and insurance premiums. It is invested in the California State Pooled Money Investment Account Portfolio managed by the State Treasurer and earns interest equivalent to the rate earned by other State Treasury funds. The Insurance Fund is a trust fund and may only be used to pay administrative costs of the Program and shortfalls resulting from defaults by insured borrowers. As a trust fund, the Insurance Fund and interest (or other earnings) generated may not be used for non-Program purposes.

OSHPD contracts for actuarial and consultant services. It obtains legal services from the State Attorney General's office and private law firms on specific items.

Cal-Mortgage staff provide reports to OSHPD's Director, the California Health and Human Services Agency (**CHHSA**), and the State Legislature. Cal-Mortgage staff also prepare monthly and annual reports showing Program activity, the cash balance of the Insurance Fund, and, in conjunction with OSHPD's accounting staff, the assets and liabilities of the Program. (See **Exhibit 3**.) For anticipated events, the Cal-Mortgage staff submit Week Ahead Reports to OSHPD administration. In even-numbered years, OSHPD contracts for an actuarial study of the Program. (Refer to Section I E for a summary of this report.) Starting with the fiscal year ending June 30, 2000, OSHPD has prepared annually two reports for the Legislature: (1) Financial Status of the Program and (2) Borrowers' Compliance with their Community Service Obligations.

Reports on the activity of the Program are published monthly and are available upon request or on the OSHPD Web site (www.oshpd.ca.gov/CalMort).

2. Application Process

Loan insurance applications follow a six step application and credit evaluation process. By structuring the process in several steps or stages, the goal is to make determinations about an application as early in the process as possible. In this way, if an applicant is not eligible, the applicant's costs are minimized.

Step One: The Cal-Mortgage Account Manager conducts a preliminary review of the application to determine eligibility of the applicant for loan insurance and to generally assess the community need and feasibility of the proposed project.

Step Two: The applicant submits additional documentation that expands on and confirms the information provided in the preliminary review. To initiate this review, the applicant must submit a \$500 non-refundable application fee. The key question under consideration at this stage is whether the proposed project is

financially feasible. Following written guidelines, Cal-Mortgage staff assesses the project and financial projections. The applicant's financial performance is analyzed using a customized financial analysis software computer program.

Cal-Mortgage staff also evaluates other factors, including the project scope, community demand, expertise of the applicant's management team, and collateral. The applicant describes the community needs the healthcare facility will meet and provides data and information to substantiate these needs. The Account Manager assesses the proposed project's consistency with the State Plan. Finally, the Account Manager conducts a financial sensitivity analysis, using different levels of need and reimbursement to assess changes in the proposed project's financial feasibility.

The Account Manager writes a Project Summary and Feasibility Analysis (**PS&FA**). This PS&FA includes a recommendation for approving the application and a proposed set of conditions. Then, the application is scheduled for review by the Advisory Loan Insurance Committee (**ALIC**).

Step Three: In a public meeting, the ALIC reviews the application. This review provides an independent analysis of the project and a forum for consideration of input from the general public. During this meeting, the ALIC votes on whether to recommend the project for approval to the Director and, if so, whether the applicant should meet specific conditions prior to final issuance of the loan guarantee.

Step Four: Following the Advisory Loan Insurance Committee meeting, the Director of OSHPD makes a decision to approve or disapprove the application.

If the Director concurs with the recommendation of the Cal-Mortgage staff and the Advisory Loan Insurance Committee to approve the application, OSHPD issues a preliminary letter of commitment specifying any conditions the applicant must meet prior to the issuance of loan insurance.

If the Director decides to guarantee a loan that the Advisory Loan Insurance Committee recommended not to insure, the Director is to notify the Secretary of the California Health and Human Services Agency and document, in writing, the programmatic or policy reasons for his decision. The Secretary may request that the California Health Policy and Data Advisory Commission (**CHPDAC**) conduct a hearing to review the application, the ALIC recommendation, and the Director's decision. If there is a hearing, CHPDAC makes its recommendation to the Secretary. At any point in this review process, the Secretary may decide to sustain the decision, modify the loan insurance guarantee, deny the application, or direct another review by the ALIC or Cal-Mortgage staff.

If the application for loan insurance is denied, the applicant may petition for a fair hearing before the California Health Policy and Data Advisory Commission.

Step Five: This step involves the sale of the bonds or certificates of participation. At this stage, the applicant must provide OSHPD with documentation that conditions contained in the commitment letter have been met.

Step Six: The final step is the close of escrow, at which point the loan is made and loan insurance is effective. Loans are secured by a first mortgage, first deed of trust or other first priority lien. Borrowers are also subject to security agreements, which specify conditions, covenants, and restrictions.

Exhibit 4 shows a listing of insured projects. **Exhibits 7 & 8** show projects by facility type. And, **Exhibits 9 & 10** show projects by county .

3. Program Fees and Charges

The Program charges an application fee (\$500), a one-time certification and inspection fee of four-tenths of one percent (0.4 percent) of the insured loan, and an insurance premium fee. Effective January 1, 2001, the insurance premium for new loans is a one-time amount not to exceed three percent of total principal and interest on the loan. Regulations, adopted in March 2001, allow for a discounted premium rate for those applicants who obtain a credit rating or assessment from Standard & Poor's, Moody's, or Fitch.

4. Project Monitoring

Following the close of escrow, OSHPD's Cal-Mortgage staff monitor each borrower for compliance with loan covenants. The Account Manager reviews periodic financial reports, payment information, and insurance coverage. The Account Manager also visits the facility site in order to verify the continuing solvency of the borrower and the ongoing ability to make timely payments.

The monitoring process is intended to detect, as early as possible, potential problems. If a problem is detected, the Account Manager and Cal-Mortgage management assist the borrower in resolving the financial problem.

Cal-Mortgage staff monitor all borrowers and assigns a risk rating (A to F) to each project. Risk ratings may be revised during the year as circumstances relating to a borrower change. The risk ratings have a corresponding relationship to various stages of default:

- A no problems
- B minor problems
- C moderate problems
- D serious problems; missed payments
- E default anticipated
- F defaulted; Insurance Fund being used

A computer database is maintained about all borrowers and insured projects. Various monitoring reports are produced for Cal-Mortgage staff. The computer database can also produce letters to borrowers if they have not provided required reporting documents.

5. Remedies for Projects with Problems

When an insured borrower fails to submit a required payment or defaults on the contractual terms or covenants of the insured loan, OSHPD informally communicates with the facility's management or borrower. To facilitate communication and collaboration, the Account Manager may visit the facility. OSHPD's approach is to solve the problem by working with the facility's management and governing board to develop a plan of correction. If the borrower fails to submit the required report or correct the default, OSHPD sends a formal notice in writing stating the nature of the default. If the borrower further fails to submit a plan or submits a plan that is unacceptable to OSHPD, then OSHPD conducts additional onsite visits. If OSHPD determines that the borrower is not making sufficient progress in submitting required reports or correcting defaults, OSHPD with the approval of the Director, may require the borrower, at the borrower's expense, to employ an independent consultant to conduct an audit of the facility's performance and make recommendations.

6. Other Practices to Lower Insurance Risk in the Program

OSHPD requires the borrower, through the Contract of Insurance, to certify periodically that the financial performance of the healthcare facility meets or exceeds specific financial ratios. OSHPD, also, requires that the borrower obtain OSHPD's approval before taking on additional debt or selling facility assets.

OSHPD requires the borrower to maintain property and casualty insurance, such as fire, boiler, earthquake, general liability, and professional liability (malpractice).

OSHPD protects the Program and the Insurance Fund from the potential insolvency of a borrower by requiring a debt service reserve fund, equal to one year's debt service payments of principal and interest.

D. Provisions to Assist Small Healthcare Facilities

Health and Safety Code Section 129355 (d) states that any State Plan shall identify impediments that preclude small facilities from utilizing the California Health Facility Construction Loan Insurance Program and shall include programmatic remedies to enable small projects to utilize the Program. Based upon Section 129355 (b), small facilities are defined as those with projects which are less than \$5 million.

The 1995 State Plan identified several measures that were implemented:

- Application process revised for document submission in steps.
- Loan commitment extended to twelve months.
- Financial feasibility workbook developed for projects under \$300,000.

OSHPD believes that these efforts, along with others, have addressed barriers related to small projects. Overall, the portfolio is substantially composed of smaller types of healthcare facilities. The proportion of the portfolio related to smaller, community-based projects (primary care clinics, chemical dependency recovery facilities, group homes, mental health programs, etc.) remains above 50 percent. These projects represented 47 percent in December 1995, 66 percent in June 2001, 58 percent in June 2004, and 55 percent in June 2006. (See **Exhibits 11 & 18.**)

OSHPD has had success in providing loan insurance to a number of small facilities. But, it should be noted that healthcare delivery is constantly changing and evolving. To assure equitable accessibility, OSHPD will continue to monitor the kinds of projects that the Program insures and will continue to be alert for new impediments and the corresponding remedies. (See **Exhibit 6.**)

E. Actuarial Studies

When the Program was established in 1969, it was not funded with a capital reserve fund, as the Program was backed by the full faith and credit of the State. With the receipt of premiums and fees since 1972, the Insurance Fund was \$174 million at the end of the FY 2005-06. (See **Exhibits 3 & 15.**) In spite of the defaults discussed in Section I. F. of this State Plan, the Insurance Fund has maintained a positive balance.

Since 1992, OSHPD has contracted every even-numbered year for a study.

2006 Actuarial Report

The most recent actuarial study was conducted by Mercer Oliver Wyman (**Mercer**). Their report, completed in December 2006, addressed the following objectives:

- Determine the reserve sufficiency of the funds in the Insurance Fund as of June 30, 2006.
- Assess the risk to the State's General Fund of the Loan Insurance Program.

As to the first issue, Mercer concluded that assuming "normal and expected" conditions, the Loan Insurance Program should maintain a positive Insurance Fund balance during at least the next 30 years. As to the second issue, Mercer found that the only risk to the General Fund would derive from its most

pessimistic scenario, which is a ten percent annual probability of a catastrophic claim. Mercer noted that such a scenario is highly unlikely and that, even if it did occur, the Program would have funds for 15 years.

F. Defaulted Loans Requiring Payments from Insurance Fund

Since 1992, 13 borrowers (with 15 loans) defaulted, resulting in payments from the Insurance Fund. (See **Exhibit 23.**) Since the 2005 State Plan, two loans have defaulted. A brief description for each default follows (listed in chronological order of payments from the Insurance Fund):

CACCOA. Community Adult Care Centers of America (**CACCOA**) was a nonprofit corporation that planned to acquire a 78-bed skilled nursing facility in Long Beach, an 83-bed board and care facility in Los Angeles, and adjacent sites at each location to construct additional facilities. In 1990, OSHPD insured this project for \$10 million.

Due to CACCOA's failure to develop the project as required, OSHPD declared it in default in May 1992 and paid off the insured note with approximately \$4.5 million from the Insurance Fund. In July 1992, OSHPD instituted legal proceedings to recover expended funds. In a settlement agreement, reached in 1999, the assets were sold to unrelated parties for approximately \$1.5 million. OSHPD received payments from the note on this sale until November 1, 2004, when the note was paid off.

Lytton Gardens (#1). In 1981, OSHPD insured a \$9.6 million loan to construct a 120-bed, multi-story skilled nursing facility in Palo Alto.

In 1994, due to operational problems, Lytton Gardens defaulted on two loan payments. OSHPD made these two payments from the Insurance Fund. In 1995, Lytton Gardens resumed its monthly debt service payments. In December 1999, the loan was refinanced, which included full repayment with interest to the Insurance Fund.

Triad. Triad Healthcare Corporation was a nonprofit corporation formed to purchase two hospitals in Sherman Oaks and Canoga Park from a for-profit corporation. In 1991, OSHPD insured \$142 million in short-term taxable notes to acquire the hospitals.

In 1993, Triad defaulted on its loan as a result of losses from operations. In February 1994, Triad filed for Chapter 11 protection in Federal Bankruptcy Court. In April 1995, the borrower, renamed as Sherman Oaks Health System, exited bankruptcy and continued operating Sherman Oaks Hospital and Medical Center. The second facility (West Valley Hospital) was sold with the proceeds going to the Loan Insurance Fund. The bankruptcy court

restructured Triad's obligation to OSHPD. OSHPD is responsible for making the payments on the restructured debt. OSHPD filed lawsuits against individuals and entities involved in the Triad financing to recover damages. OSHPD has received settlements of \$54 million.

Subsequent hospital operations were not sufficiently profitable to maintain required monthly debt payments. On December 30, 2005, Sherman Oaks Health System was sold to a for-profit entity for net proceeds of \$16,564,971. The Attorney General consented to the sale. All proceeds from the sale were put into an escrow account for the refunding of bonds at the earliest call date of August 1, 2008.

Los Medanos. In 1990, OSHPD insured an \$11.1 million loan to the Los Medanos Health Care Corporation, a healthcare district in Pittsburg. The project was for renovation and expansion of Los Medanos Community Hospital, paying off existing debt, and providing funds for future capital projects.

In 1994, Los Medanos defaulted on the loan and subsequently filed for Chapter 9 bankruptcy. A settlement agreement was signed in September 1998. Property owners in the healthcare district continue to pay a property tax in order to repay amounts due OSHPD in the settlement agreement. Payments are expected to continue through 2017 at \$100,000 per year.

Healthcare Delivery Systems. In 1992, OSHPD insured a \$9.93 million loan to Healthcare Delivery Services (**HCDS**) for the acquisition of a group home for emotionally disturbed children on a 2.68-acre campus in Van Nuys.

As a result of a variety of problems, the facility license was suspended and clients were moved to other facilities. Unable to operate the facility, HCDS defaulted on its loan. OSHPD made payments from the Insurance Fund starting in 1995 until December 2000, when OSHPD accelerated the debt and repaid the outstanding bonds. In November 1997, OSHPD foreclosed and took title to the property. The facility was sold in 2001 to an unrelated corporation for \$3.3 million. Mortgage payments to OSHPD are being made.

Villa View. In 1984, OSHPD insured a \$6.9 million loan to Villa View Community Hospital, a 100-bed acute care hospital with psychiatric services in San Diego. The project was for refinancing a prior bond issue, remodeling the hospital, and acquiring new equipment.

As a result of operational problems, Villa View defaulted on its bond payments in August 1997. OSHPD foreclosed and sold the hospital and the original bonds were paid off. The new owner filed for bankruptcy and the facility was sold for a second time. In August 2006, Villa View was sold

again to a for-profit entity. The new owners then paid \$1.55 million to discharge OSHPD's outstanding lien.

Third Floor. In 1991, OSHPD insured a loan totaling \$3.2 million to the Third Floor for the purchase of land and buildings for a residential substance abuse facility in Fresno.

In the mid-1990s, this program's federal funding was reduced. The project was unable to make mortgage payments from 1996-1998. In April 1998, OSHPD declared the loan to be defaulted and paid off the loan. The building was sold with partial repayment made to the Insurance Fund. The Third Floor continued its other operations and made regular payments to the Insurance Fund. In April 2001, the Third Floor obtained new financing and made a full repayment.

Hernandad. In 1994, OSHPD insured a \$4,385,000 loan to Hernandad Mexicana Nacional, Inc. to acquire, renovate, and purchase equipment for two primary care and dental clinic properties located in Los Angeles and North Hollywood.

Hernandad failed to open the clinics and, as a result of a deteriorating financial condition, stopped making loan payments in 1998. Since December 1998, OSHPD has paid the semi-annual payments from the Insurance Fund. In May 1999, the East Los Angeles Health Task Force (**ELATF**) began operations in the Los Angeles clinic without making any debt service payments. ELAHTF vacated the property in September 2005. In 2006, the South Hill property was marketed for sale. St. John's Well Child and Family Center made a purchase offer. As of January 2007, the property sale is in escrow. When the sale closes, OSHPD will restructure the debt with Hernandad, take a note from St. John's for the South Hill property, and accelerate the outstanding bonds of \$3.4 million.

Kazi House. In August 1991 and January 1992, OSHPD insured two loans totaling \$2.67 million to Kazi House for a 120-bed residential drug and alcohol facility in South Central Los Angeles.

After losing its contract with the Department of Corrections in 1994, Kazi House started experiencing lower activity. With OSHPD's support, Kazi tried developing new relationships with various entities that could provide assistance or potential referrals, but all efforts failed. In December 1999, OSHPD sent Kazi a Notice of Default and began making payments from the Insurance Fund. In March 2000, OSHPD discovered that Kazi had ceased operations and abandoned its facility. In December 2000, OSHPD paid off the bondholders. OSHPD foreclosed and took possession of the property in May 2001. The building was demolished in April 2005. The property has

been sold to a housing developer. Escrow is expected to close in April 2007, with net proceeds of \$2.2 million.

Sierra Sunrise. In 1991, OSHPD insured a loan totaling \$15 million to Sierra Sunrise Senior Village to construct 130 units of independent living and 24 assisted living units in Chico. OSHPD also insured an additional debt of \$5.27 million in 1993 for the construction of a 90- bed skilled nursing facility adjacent to the prior units.

In March 2001, the owner, Walker Senior Housing Corporation VII, notified OSHPD that it intended to file bankruptcy unless OSHPD took over the facility. The Sierra Sunrise Board of Directors retained two different facility managers in an attempt to improve operations. The Board has also sought interested buyers for the property. In January 2005, the Board signed a sale agreement. In July 2005, a lawsuit from the original real estate development partner was filed against OSHPD and the title company. The foreclosure process and sale were on hold until January 2006 when the issues were resolved. On April 10, 2006, the foreclosure action and property sale occurred. The sale price of \$16.8 million paid off bond holders and repaid \$1.2 million to the Insurance Fund. Any funds left in the Corporation upon closure in 2007 are to be paid to the Insurance Fund. On January 4, 2007, OSHPD received \$500,000.

Apple Valley. In 1990, OSHPD insured a loan totaling \$8.5 million to the Apple Valley Christian Centers to acquire land and construct a 99-bed skilled nursing facility (SNF) in the Town of Apple Valley. In May 2001, Apple Valley refinanced for \$9.5 million at lower interest rates.

In late 2000, due to certification problems with the Department of Health Services, management was replaced. In late 2001, Apple Valley began missing its monthly debt service payments. From 2001 to 2003, Apple Valley had recurring issues with Department of Health Services licensing, patient admissions and occupancy, and professional liability insurance. In June 2003, new board members were appointed and hired a new management agent. Occupancy and financial issues continued until 2006. Beginning July 2006, operations became more stable and debt service payments resumed. Several payments have been made to reimburse the Insurance Fund. Cal-Mortgage staff continue to work with the management agent and the Board to assure the turn-around.

Sunset Haven. In 1991, OSHPD insured a loan totaling \$6.2 million to Sunset Haven to build a 70-bed skilled nursing unit in Upland. In August 1997, the loan was refinanced for \$6.3 million. Sunset Haven is a multi-level senior living facility.

Beginning in February 2002, Sunset Haven started missing monthly debt service payments. In October 2003, Sunset Haven's Board hired a new management company. A turn-around was not successful. Due to continuing financial losses, cash flow difficulties, and low potential for financial improvement, the Board decided to sell to another healthcare provider. On August 11, 2006, Generations Healthcare signed a sales purchase agreement. The Attorney General consented to the sale. On January 2, 2007, escrow closed with the outstanding insured loan of \$4.9 million and outstanding \$900,000 line-of-credit paid off. Funds left in the Corporation upon closure are to be paid to the Insurance Fund.

Lytton Gardens (#2). After refinancing in 1999, Lytton Gardens made timely payments until April 2003. They claimed that insufficient Medi-Cal reimbursement and escalating nursing expenses made it uneconomical for skilled nursing services and pursued an Alzheimer's assisted living unit. The DSRF was depleted. The Insurance Fund was then used for two bondholder payments.

In January 2004, the CEO resigned. In April 2004, Board and management decided not to pursue an alternative business strategy and to reestablish skilled nursing services on all floors. In March 2005, the beds were re-licensed. Within months, regular monthly debt service payments renewed. With the closure of two nearby SNFs and a subsequent increase in Medi-Cal reimbursement, a turn-around was fully accomplished within twelve months. The Insurance Fund was fully repaid.

In order to achieve greater operational and fiscal strength, as of January 2007, the Board was finalizing an affiliation agreement with another senior healthcare provider, the Episcopal Homes Foundation.

Burt Center. Burt Center operates a group home for mentally disabled or emotionally disturbed children in San Francisco. In April 2001, OSHPD insured a loan for \$3,200,000 to refinance loans on two buildings and remodel / renovate one of the buildings to house an additional 12 children. In June 2003, OSHPD insured a line-of-credit to provide emergency cash.

In August 2002, the founder, Mary Burt, passed away. Her passing caused disruption to the Burt Center. As they had been unable to keep both of the facilities at capacity, they decided to move all children into the Grove Street facility and to sell the Baker Street facility. During this time, Board membership also changed. Since July 2005, the Grove Street facility has operated at capacity. Burt staff have implemented programs that are reimbursable, providing additional revenue. Operations improved so that Burt has resumed some monthly debt service payments. In October 2006, the Board accepted a purchase offer for the Baker Street facility. The

expected sale will reduce debt to a manageable level and allow Burt Center to continue providing services.

Since the 2005 State Plan, several default resolutions occurred with positive impact to the Program. One defaulted project achieved a successful turn-around and fully repaid the Insurance Fund. Five facilities were sold resulting in \$5.5 million cash payments to the Insurance Fund, plus the elimination in \$37.7 million in loan obligations (not including any future interest payments).

OSHPD staff will continue to manage defaulted loans in order to minimize financial impact to the Program.

G. Partnership with Other State Agencies

Since projects insured by OSHPD often rely heavily on State, Federal, or local government funding, OSHPD coordinates its loan insurance activities within the program priorities of other State agencies.

OSHPD obtains letters from State and local departments that provide the principal source of funding to the applicant, documenting that the applicant's project is consistent with the program plans of the funding source.

OSHPD has regular meetings and discussions to review programmatic changes or issues with the licensing divisions and the reimbursement divisions of the Department of Health Services and with other state departments, as needed.

Section II. Evaluation of the Program's Success in Meeting Its Mission

The purposes of the Program are twofold: (1) to provide, without cost to the State, a loan insurance program for health facility construction, improvement, and expansion projects, thus increasing the availability of private capital for health facilities; and (2) to rationally meet the need for new, expanded, or modernized public and nonprofit health facilities necessary to protect the health of all Californians. The provisions of the California Health Facility Construction Loan Insurance Law are to be "liberally construed" to achieve these purposes (Health & Safety Code Section 129005).

Without Cost to the State of California

The Program has operated since 1972, insuring over \$5 billion in loans to more than 400 healthcare facilities, many in rural and underserved areas of the State.

The Program is entirely self-supporting from its insurance premiums and related income. As of December 31, 2006, the Insurance Fund had a cash balance of \$171.5 million. In the past 34 years, 15 defaults have occurred with all required payments coming from the Insurance Fund. The Program has operated without cost to the State General Fund.

According to the 2006 Actuarial Report, the Program is projected to remain solvent under normal operating conditions (without catastrophic losses) and operate without cost to the State through the forecast period of 2036.

To Meet the Need for Facilities

The basic purpose of meeting healthcare facility construction needs has not changed over the years. What has changed are the locations and methodologies by which healthcare is being delivered (for example, in-patient to out-patient). This has had an effect on the types of healthcare facilities that are needed.

In order to reflect California's changing needs, the statutory definition of eligible "health facility" has been expanded over time. While originally focusing on hospitals (and those facilities that were necessary adjuncts to hospitals), California has recognized that some services, which traditionally were delivered in the hospital or other institutions, have become separate facilities. Today, many different facility types are eligible for loan insurance, such as community care facilities, primary care clinics, specialty care clinics, substance abuse treatment facilities, group homes, skilled nursing facilities, and "multi-level" facilities designed to prevent institutionalization of the elderly. (See **Exhibits 7, 8, 16, & 17.**)

OSHPD loan insurance activities continue to evolve to reflect California's changing health needs:

- The 2001 State Plan noted that the changing healthcare marketplace called for the Program to include projects that were financially stronger and able to obtain independent credit ratings. Since January 1, 2001, ten new projects with independent credit ratings or credit opinions have been insured, representing \$376,875,000, or 30 percent of the total portfolio.
- As with the 1995 State Plan, the 2001 and 2005 State Plans added emphasis to facilities with senior healthcare, such as multi-level facilities. Since the prior State Plan, four such projects were insured, representing \$66,115,000 in insured loans or 57 percent of the total newly insured loans.

This constant adaptation of OSHPD's review and project approval processes and the resulting increase in financially stronger borrowers and senior healthcare facilities reflect the continuing relevance of the Program to the healthcare market place.

Commitment to Mission

OSHPD and the Cal-Mortgage staff remain committed to continuing the careful management of the Program in order to benefit communities throughout California, at no cost to State taxpayers.

Section III. Overview of Trends in Healthcare

Many trends are affecting healthcare facilities. These trends also affect the operations of the Loan Insurance Program. OSHPD views the following issues as those which currently have significant impact on the Program:

- Access to healthcare for Californians.
- Growth in the number of older adults.
- Hospital implementation of seismic safety requirements.
- Construction cost increases.
- Financial solvency challenges.
- Strong governance and good management are still critical for success.

A. Access to Healthcare for Californians

Throughout California there are rural and urban areas and populations that are recognized as medically underserved. Factors contributing to these areas' healthcare needs not being met include poverty, local economy, shortages of healthcare personnel, and geographic barriers.

OSHPD's California Healthcare Workforce and Policy Commission (supported by the OSHPD Healthcare Workforce and Community Development Division staff) have collected data and developed a methodology that ranks the 541 urban, rural, and frontier medical service study areas in California relative to their need for primary care services. **Exhibit 18** is the most currently available map showing those areas of critical need throughout California. More than 5.7 million Californians reside in those areas of critical need. In addition, OSHPD, in cooperation with the federal government, identifies areas in the State that have a shortage of healthcare professionals (primary care, mental, and dental). These areas are called "Health Professional Shortage Areas." **Exhibits 19, 20, and 21** are the most currently available maps of these areas throughout the State.

The maps are included in this report to illustrate the large number of areas identified with healthcare service needs. When a loan insurance application is received, Cal-Mortgage staff check with the Shortage Designation Program staff to see if the healthcare facility is located in a currently designated medically underserved area or health professional shortage area.

OSHPD, through the California Health Facilities Construction Loan Insurance Program, will continue to complement these efforts by insuring loans in areas where healthcare facilities are needed.

B. Growth in the Number of Older Adults

Although the State's population is relatively young, with only 10 per cent of Californians 65 or older, more seniors reside in California than in any other state. Between 2000 and 2020, the number of seniors living in California is expected to jump from 3.7 million to 6.6 million (Reference #1). In four decades, the number of older adults is expected to triple, to more than 10 million. Most of this growth is predicted to occur between 2010 and 2030 as baby boomers enter their retirement years (Reference #2).

During these same four decades, the number of those ages 85 and older is likely to increase, perhaps as much as fourfold. This growth of the population over 85 years is likely to have great impact on health and support systems since the frail elderly need more health and support services.

Historically, the elderly have been cared for in institutional settings, such as nursing homes. California has more than 1,400 nursing homes, 15 percent of which are not-for-profit. More than 100,000 Californians reside in skilled nursing facilities.

As California's population ages, the need for long-term care will expand. The pattern of long-term care will change as more options become available to address the desires of the state's older population to maintain their highest level of independence for as long as possible.

As the need for long-term care grows and the pattern of long-term care changes, there will be a need for additional skilled nursing facilities and more community-based health centers. These are opportunities where the Loan Insurance Program could benefit the borrowing organization.

C. Hospital Implementation of Seismic Safety Requirements

The Alfred E. Alquist Hospital Facilities Seismic Safety Act of 1983 established a set of seismic safety standards for hospital construction. Senate Bill 1953 (**SB 1953**), signed into law on September 2, 1994, requires that all acute care hospitals meet the minimum seismic standards established by this Act.

The legislation, for the first time, required existing hospital buildings to be retrofitted to meet seismic safety standards. All general acute care hospital buildings must meet minimum life safety requirements by 2008. Then, by 2030,

they must be in substantial compliance with the Seismic Safety Act. Legislation was enacted that allows extensions to the 2008 deadline to be granted by the OSHPD's Facilities Development Division. The maximum length of these extensions is five years to 2013.

As the 2013 deadline approaches, additional legislation has been passed. Hospitals making significant construction progress will be allowed an additional two years to achieve seismic safety compliance.

OSHPD's Facilities Development Division is reviewing and evaluating the Hazards U.S. (**HAZUS**) technology, developed by the Federal Emergency Management Agency. This program uses a different methodology to assess the risks of earthquake damage for buildings. If approved, some hospital buildings could be reclassified to a lower risk category and may not need replacing by 2008 or 2013.

The Loan Insurance Program is a financial resource to assist hospitals in borrowing funds at lower interest rates to undertake construction or retrofit projects for compliance with seismic safety requirements.

D. Construction Cost Increases

Over the past several years, construction costs have been increasing 10% to 15% per year due to the sheer volume of construction projects. It is a simple matter of supply and demand. The demand for construction services is much greater than the supply of contractors (skilled, unskilled, and supervisory labor) due to the volume of work going on in schools, hospitals, prisons, libraries, and other public institutions and infrastructure. Also, there is a great deal of construction overseas, especially in China, where they are preparing for the next Olympics. In 2006, several infrastructure bonds were approved by voters which will increase the demand for construction services in California.

Structural steel prices began to rise in 2004, principally due to demand from China. Prices for all steel products rose 35% in 2004 and steel and copper wire rose 60% in California. Material costs in general now make up 55% of general construction costs and labor costs make up the other 45%.

A study by Langdon Wilson, a construction consulting firm, indicates that hospital construction costs have risen more than 66% over the past three years, from \$330 per square foot to \$550 per square foot.

To minimize the impact of unexpected cost escalation, the Account Managers are encouraging applicants to obtain independent third party estimates at the end of the project design phase and the end of construction document preparation. Account Managers are also encouraging borrowers to include sufficient

contingency reserves in their projections to assure that there are adequate funds from the financing. Finally, increasing cost uncertainty supports even more the Program's practice of waiting to give final approval of the financing until the building permit and construction contract are finalized.

E. Financial Solvency Challenges

Many healthcare facilities in California continue to confront financial issues.

Payers have tried to maintain or reduce healthcare payments. While over the past two years, payments from Medicare, Medi-Cal, and health insurance plans have increased, large purchasers of healthcare services and health insurance plans continue to try to restrain increases in provider payments.

Operating issues continue to affect costs. The shortage of nurses (as well as other healthcare professionals) is creating inflationary pressure on staffing costs (wages, benefits, training costs, retention/recruitment bonuses, and temporary coverage expenses). Insurance coverage (workers' compensation, professional liability, and health) premium increases are impacting many healthcare facilities. Drugs that provide more effective therapy are more expensive than those previously used.

The impact on a healthcare facility of the un-insured is two fold. Services are provided with no payment or revenue. Operating costs increase as the number of un-insured treatments increase.

The combination of payment constraints and increasing costs has the effect of compressing operating margins and putting pressure on financial liquidity.

These financial circumstances present ongoing challenges for OSHPD. Loan insurance can only be approved for financially feasible projects and, thus, "at no cost to the State." OSHPD will need to continue to carefully evaluate loan insurance applications and to diligently monitor existing insured borrowers.

F. Strong Governance and Good Management Still Critical for Success

Management and governance remain the essential component for successful healthcare facilities.

A strong governing board provides strategic direction and general support for the healthcare facility's initiatives in meeting its mission. In addition to their fiduciary responsibility of reviewing financial performance and prudently managing the facility's assets, governing boards must be reviewing market conditions of healthcare services, professional staff, physicians, and insurance plans in an

organized way. Governing boards also are key in identifying new ways to raise capital and frequently are the cornerstone of successful fund raising efforts.

Good management has an ability to chart a clearly defined course and lead the organization. With numerous financial pressures (changing reimbursement, cost increases, health manpower shortages, new medical technology, and new information technology), management must be prepared to develop new strategies.

Healthcare leadership must be creative, pro-active, flexible, and disciplined to adapt to the quickly changing healthcare marketplace. Together, the governing board and management both need to demonstrate a willingness to make tough decisions.

The evaluation of an applicant for loan insurance involves, in general terms, three areas of assessment: capacity, collateral, and character. The assessment areas for financial capacity (ability to repay) and financial collateral have established objective measures for evaluating an applicant and the proposed project. Character (strong governance and good management) is intangible and requires subjective evaluation. While past successes are usually a good indicator, with the constantly changing healthcare environment, it is important that an assessment of character is also done during the application review. The Account Manager, Cal-Mortgage Division Management, and the Advisory Loan Insurance Committee collectively assess the borrower for governing board strength and management depth and skill.

Conclusion

Healthcare remains dynamic and challenging. The demand for healthcare services continues to grow. Health facilities and the roles they play in the healthcare delivery system are continually evolving.

OSHPD must monitor the changing business environment in which applicants operate in order to prudently approve insurance for those borrowers who provide needed healthcare services and can remain viable and competitive in this dynamic and challenging environment.

In an era with increasing demand for services coupled with payment constraints, increasing operating costs, and added building and technology requirements, the ability for healthcare facilities to access low cost capital remains an important component in OSHPD's vision of providing equitable healthcare accessibility for California.

Section IV. Overview of Changes in the Healthcare Loan Insurance and Debt Financing Industries (Markets)

Since the previous State Plan, in general, healthcare financing and loan insurance markets have been stable. The cost of borrowing in the tax-exempt market is still near historic lows for long-term borrowing.

Previously, for a short period of time, the State's credit rating was lowered to "BBB" on July 24, 2003 and revised upward to "A" on August 25, 2004. When the State's credit rating is lowered, interest rates for new Cal-Mortgage insured debt rise. The resulting impact is that a healthcare facility pays more interest costs, which makes a proposed project more expensive, and decreases the value of the Program's loan insurance. Financial advisors (with the assistance of Cal-Mortgage staff) were able to supplement the State loan insurance with "wrap" insurance. "Wrap" insurance is additional insurance coverage from a commercial insurance company, which insures that the Program and the State will fulfill their loan insurance obligations. (See **Exhibit 2.**) The impact on a healthcare facility that borrowed or refinanced during this time with "wrap" insurance was a greater up-front loan insurance premium to achieve a lower interest rate. As a result, in fiscal years 2004, 2005 and 2006, several insured borrowings were wrapped by commercial loan insurance. On May 18, 2006, Standard & Poor's upgraded the credit rating for the State of California to "A+" from "A" and correspondingly changed the ratings of debt insured by the Loan Insurance Program.

A general economic trend that influences the Program is interest rates. During the past two years, short term rates have increased one percent. Long term rates have declined slightly. At some times, the interest yield curve with respect to US treasuries has been inverted, where short term rates have higher interest yield than longer maturities. This has affected the yield curve for other types of debt financings, leaving the yield curves more flat. Also, the yield spread between healthcare debt with an "A+" credit rating and with a "BBB-" credit rating became more compressed from 1% to 0.25%. This smaller difference diminished the economic value that loan insurance could bring to a loan transaction.

The flattening of the interest yield curve and the compression of bond rates between credit categories made it less economically attractive for loan insurance. As a result, the number of newly insured loans declined in fiscal years 2005 and 2006. Program activity in terms of insured loan amount has picked up in FY 2006-07, mainly because two hospitals, which are already insured, are undertaking expansion projects based upon increasing population in their service areas.

The interest rate changes have generated a new trend among large healthcare systems and their debt financings. They have elected to use more variable rate debt with a variable-to-fixed swap. Because short term rates are very close to

long term rates, a borrower can create variable rate debt and then, using a swap (variable to fixed) hedge the interest rate risk in order to achieve lower interest costs than could be achieved with a fixed rate loan. Cal-Mortgage staff are watching this trend and learning more about the structure, mechanisms, and pricing of swaps.

A trend mentioned in the 2005 State Plan continues with district hospitals using tax initiatives (parcel taxes, sales tax enhancements, and general obligation bonds) to provide a steady source of revenue for capital projects. With these predictable revenue sources, the healthcare districts are able to enter into debt financings without loan insurance.

Another trend in healthcare finances mentioned in the 2005 State Plan also continued. Underwriting efforts of the Loan Insurance Program are affected by the observed growing separation between financially strong facilities and financially weak facilities; especially among nonprofit hospitals (References #3 and #4). If financially weak facilities continue to become weaker, when they need to undertake construction or replacement projects and apply for loan insurance, the challenge for Cal-Mortgage staff will be to have refined the Program's underwriting criteria so that only the facilities with the ability to survive and repay debt are identified and approved for loan insurance.

Section V. Guiding Principles

OSHPD has authority to insure up to \$3 billion in loans. With a current insured loan amount of \$1.25 billion, there is an additional capacity of \$1.75 billion.

In order to focus the Program on the needs of California's healthcare system, it is administered according to guiding principles. These principles enable potential applicants to assess the consistency of their project goals with current Program policy. They also provide a frame of reference for Cal-Mortgage staff to use in determining which applications to recommend for review by the Advisory Loan Insurance Committee and for approval by OSHPD's Director.

The guiding principles are intended to be non-regulatory and flexible, except where specifically required by statute.

A. Guiding Principles of the Loan Insurance Program

- **Equitable Accessibility to Care.** The primary purpose of the Program is to assist in ensuring that needed healthcare facilities are available to provide equitable accessibility to healthcare for California. The Program should be available to assist facilities obtain financing, especially where financing alternatives are limited or non-existent. OSHPD believes this is an issue for projects in medically underserved areas, and for nonprofit or government providers who serve a disproportionate share of publicly sponsored or indigent patients.
- **Financial Feasibility.** The Program is required by Health & Safety Code Section 129005 to operate "without cost to the State." All projects must be able to service all debt, including their insured loan. When projects depend heavily on government programs for reimbursement, applicants should have strong support from the appropriate principal Federal, State or local agencies that administer programs supporting services provided by the applicant.
- **Community Need.** Applicants must provide a description of the community needs that the facility will meet and data to substantiate these needs. OSHPD staff evaluate feasibility information to determine if the facility is needed by the community to provide the specified services. Where there is significant competition among multiple providers for the same patient population, such competition can be an indicator that there is adequate service capacity available to the patient population.
- **Actuarial Stability.** OSHPD encourages applications from borrowers that have sufficient credit quality and applications for projects that, if approved, would improve the Program's actuarial stability.

- **Diversification of Portfolio.** OSHPD recognizes the need to provide for a reasonable balance among all types of healthcare facilities. It is also important to maintain geographic diversity with all regions of the state included in the portfolio.
- **Access to Capital.** OSHPD recognizes the particular problems faced by very small projects (generally those requiring less than \$5 million) and will work pro-actively with small applicants, the financial community, and other State agencies to help meet their needs for capital.
- **Adequate Collateral Security.** Applicants must provide collateral security to cover the insured loan. Projects insured by OSHPD must be built on land owned by the applicant or on land with a long-term lease.
- **Obligation to Provide Community Service.** Under existing law, Cal-Mortgage insured projects have a community service obligation. To be eligible for insurance, applicants are required to offer reasonable assurance that the services of the healthcare facility will be available to all persons residing or employed in the area served by the facility.
- **Program Exposure.** The Program should be managed and loan applications should be approved within the context that no one individual project should be so large that it makes the Program actuarially unsound and potentially jeopardizes the Program's ability to operate without State funds.

B. Guiding Principles for Applicants and Borrowers

An applicant is expected to make an equity contribution to the project. The applicant's equity should be from operating surpluses or donations. The contributed equity should be in any combination of real property, personal property, or cash.

If an applicant owes debt to a related corporation, the related corporation will be expected to agree that, in the event the borrower defaults in its loan payments insured by OSHPD, the debt to the related corporation will be forgiven.

Each applicant must certify that board members, officers, employees, or their families will not receive a direct benefit from the bond proceeds.

The healthcare facility is expected to be owned and operated by an existing nonprofit organization. A situation where an existing healthcare facility is being sold by a for-profit corporation to a nonprofit organization is generally inconsistent with program eligibility.

The construction phase of the project is expected to be scheduled to begin within an appropriate period from the close of the insured loan transaction.

A borrower's activities are expected to be complementary to the program policies of State, Federal, and local governmental agencies.

A borrower is expected to comply with the laws and regulations of the State, Federal, and local governments.

Section VI. Goals and Objectives: 2007 - 2009

A. Proposals to Ensure the Program Effectively Addresses the Healthcare Needs of Californians

1. Identify Priority Needs

In previous State Plans, OSHPD had identified priority needs to provide a framework for staff and the Advisory Loan Insurance Committee in reviewing new applications. For purposes of this State Plan, OSHPD has determined that the following types of projects are deemed to have high priority and will be encouraged (for profile of potential applications, see **Exhibit 6**):

- Projects in medically underserved areas or projects that serve medically underserved populations.
- Projects that involve compliance with hospital seismic safety standards (SB1953).
- Projects that enhance the actuarial stability of the Program. Projects that are especially strong financially and are able to obtain an independent credit rating.
- Projects that provide services to keep people with special needs functioning optimally in a community-based environment and avoiding the need for institutional placement. Special needs populations would include, but not be limited to, the elderly, children, persons with mental or developmental disabilities, and persons in substance abuse therapy.
- Projects that promote access to primary care services.
- Projects that provide innovative solutions to healthcare delivery problems. These may include projects that promote the development of healthcare networks in rural areas, projects that provide integrated services for persons with chronic health conditions, or projects that develop continuums of service.
- Projects that make use of new technologies to improve access to needed care or improve the quality of care.
- Projects that reduce risk to the Program's Insurance Fund. This would include projects to refinance debt already insured by OSHPD to substantially reduce interest rates and projects to merge facilities already insured by the Program in order to realize economies of scale or other operating efficiencies.

2. Collaborate with Healthcare Associations

OSHPD's Cal-Mortgage staff will continue to work in collaboration with various healthcare associations to identify problems and evaluate options for healthcare facility financing throughout California.

3. Work Closely with Investment Bankers and Financial Consultants

OSHPD's Cal-Mortgage staff will increase its efforts to work closely with investment bankers and financial consultants in order to have Program requirements responsive to potential borrowers' needs, while maintaining appropriate security for the repayment of the loans.

From 1995 to 2000, OSHPD focused the Program to those borrowers that did not have other financing options. The current belief is that the Program can more effectively address the needs of all Californians if the Program insures loans to a greater diversity of credit ratings.

There are opportunities to implement programmatic changes that are responsive to a wider range of healthcare facilities. Revisions in the insurance premium structure, proposed revisions of covenants, and the introduction of variable rate bond financing arrangements will be further refined.

Our goal is twofold: to expand the availability of the Program to financially "stronger" borrowers, while remaining the primary loan insurer for essential healthcare facilities.

4. Work with Commercial Loan Insurance Companies to Provide a "Wrap" Insurance Alternative

OSHPD's Cal-Mortgage staff will continue to work closely with commercial loan insurance companies in order to maximize the Program's value to potential borrowers' needs and assure the Program's availability to meet healthcare needs of Californians.

Cal-Mortgage staff also will continue to develop relationships with commercial loan company representatives and revise legal documents to incorporate wrap-around loan insurance requirements, as appropriate.

B. Proposals to Reduce Program Risk

1. Increase Diversity in the Portfolio's Range of Borrowers' Credit Ratings

Presently, the portfolio consists substantially of non-investment grade credit-rated borrowers. Overall, increasing the proportion of investment grade borrowers would reduce Program risk, as the risk of default is estimated to be lower for investment grade credit rated organizations.

- To facilitate this goal, tiered discounts to the one-time, up-front insurance premium were implemented.
- OSHPD intends to examine the usefulness of creating covenant flexibility within the legal documents to recognize the differences between borrowers' financial strength.
- OSHPD also intends to consider the appropriate use of variable rate debt in conjunction with fixed rate debt.

The goal of revising the loan insurance premium schedule, the loan covenants, and the debt financing options is to create a better balance of borrower credit risk within the Portfolio and thus reduce the overall insurance risk in the Program.

To date, this goal has been successfully achieved. Since January 1, 2001 when tiered discounts were instituted, 46% of the newly insured loans (based upon the loan amount) have been with investment grade credit rated borrowers. In FY 2006, two of the three newly insured loans were done with borrowers with independent credit ratings.

2. Develop and Implement Annual Business Plan

In the finance world, whether business or personal, it is generally accepted that a written plan will help organizations and individuals achieve success better than an oral plan.

Over the years, the OSHPD Director, ALIC members, and Cal-Mortgage staff have each known that the following produced good results for the Program:

- Insuring loans
- Having no defaults
- Staying within the administrative budget
- Having a prudent insurance reserve in order to generate interest earnings

These objectives have not always been met every year. There have been defaults. New insured loan volume has been low in some years. While always

within budget, administrative expenses have been higher in some years. In 2003 and 2004, the investment rate of return on the Insurance Fund was below 2%.

This proposal is to identify and quantify the key factors in the Program's business model. By compiling each fiscal year's business plan in writing and discussing this annual plan with the OSHPD Director and the ALIC, it is believed that efforts will be more focused and coordinated:

- Marketing efforts will be enhanced.
- Underwriting analysis will be sharper.
- Monitoring will be more diligent.
- Problem identification will be more proactive.
- Defaults will be resolved quicker.

The business plan is similar in some respects to the Program's actuarial study, but does not use long range assumptions, those covering 30-year time frames.

The business plan is intended to guide staff to find objectives to achieve positive results. A positive result for the Program on an annual basis is an increase to the Insurance Fund cash balance or positive net income.

By striving to have positive net income each year and increasing the Program's insurance reserves, the goal of operating the Program at no cost to the State can be maintained.

3. Retain, Train, and Recruit Staff with Finance Skills and Management Abilities

Since the previous State Plan, the Program has had success with fewer new defaults, resolution of prior defaults and early identification and correction of problem situations. Many factors are involved, but a significant one is the knowledge, skills, and abilities of the Cal-Mortgage staff.

Since 2000, with staff turnover, it has evolved that now nearly all Account Managers have a college degree in business administration or finance. Staff have strong accounting skills. Some staff have advanced degrees and professional certifications. With these accounting skills, staff have identified operating issues and understood the significance of the borrower's operating situation. Operating problems show up in quarterly financial statements and audited financial reports in advance of the borrower having problems making monthly debt service payments. In the application review process, a key document is the financial feasibility analysis. Utilizing the same accounting skills, staff have been able to better assess the strengths and weaknesses of the projections.

Another attribute of the newly hired Cal-Mortgage staff is prior private sector management knowledge and ability. While Cal-Mortgage Account Managers do not manage staff, they do interact with chief executive officers, chief financial officers, and board members who are managing their healthcare facilities. Cal-Mortgage staff utilize management abilities to problem solve, resolve conflict, negotiate, and assess performance.

The recruitment of staff with expertise in business administration and finance has resulted in a team work approach in application reviews and problem / default situations. The ability to retain staff is important in the development of Program “institutional memory”, creating possibilities for internal promotion, and having succession planning.

The proposal is to retain this staff, continue training and development of younger staff, and when needed, recruit new staff with these knowledge, skills, and abilities. OSHPD staff have presented a proposal to Department of Personnel Administration (DPA) and State Personnel Board (SPB) to reclassify these positions. The goal is to revise the duty statement and to adjust compensation to reflect the Account Managers’ responsibilities plus their knowledge, skills, and abilities.

When staff is retained and motivated, there is a greater chance for better Program results. When operational tasks (underwriting, monitoring, and problem resolution) are effectively accomplished, the Program can better serve its mission of providing healthcare facility financing to expand access to healthcare in California and to operate at no cost to the State.

Section VII. Public Comment

The Office of Statewide Health Planning and Development invited public comment on the Draft 2007 State Plan.

First, OSHPD requested written input from April 26, 2007, through June 8, 2007. Written notices (**Exhibit 24**) with copies of the Draft 2007 State Plan were sent to 64 interested persons. Written notices (**Exhibit 25**) of the Draft 2007 State Plan were sent to 104 insured borrowers. Copies of the Draft 2007 State Plan were sent to those 22 borrowers who requested a copy. (32 borrowers requested a copy of the Final 2005 State Plan.) No written comments were received.

Second, OSHPD solicited oral input via the public meeting of the Advisory Loan Insurance Committee (**ALIC**) on July 18, 2007. No oral comments were made. The ALIC recommended for approval the 2007 State Plan.

Health and Safety Code Section 129020

Requirement for State Plan

129020. The office shall implement the loan insurance program for the construction, improvement, and expansion of public and nonprofit corporation health facilities so that, in conjunction with all other existing facilities, the necessary physical facilities for furnishing adequate health facility services will be available to all the people of the state.

Every odd-numbered year the office shall develop a state plan for use under this chapter. The plan shall include an overview of the changes in the health care industry, an overview of the financial status of the fund and the loan insurance program implemented by the office, a statement of the guiding principles of the loan insurance program, an evaluation of the program's success in meeting its mission as outlined in Section 129005, a discussion of administrative, procedural, or statutory changes that may be needed to improve management of program risks or to ensure the program effectively addresses the health needs of Californians, and the priority needs to be addressed by the loan insurance program.

The health facility construction loan insurance program shall provide for health facility distribution throughout the state in a manner that will make all types of health facility services reasonably accessible to all persons in the state according to the state plan.

What is Loan Insurance?

Loan insurance is, as the term implies, insurance to assure that a loan will be repaid. If a **borrower** is unable to pay, the **insurer** (in this case, OSHPD and the State of California) guarantees that the **lender** (typically bondholders or banks) will be paid. The **insurer** accepts the repayment risk of the **borrower** in exchange for a premium.

A **borrower** receives financial value in having loan insurance. The **lender** (bondholders, investment bankers, etc.) recognizes this guarantee and loans funds to the **borrower** at lower interest rates. Because in the financial markets, a **borrower** with a stronger credit rating pays lower interest rates. And conversely, a **lender** demands higher interest rates from a **borrower** with a weaker credit rating. See attached graph (**Exhibit 2**, page 2).

Loan insurance improves the credit rating of the **borrower**. The credit rating of the **insurer** is “transferred” to the **borrower**. And, the **borrower** receives the economic benefit of lower interest costs which offsets the loan insurance premium. See attached example (**Exhibit 2**, page 3). Financial consultants and investment bankers advise the **borrower** of this trade-off and calculate the cost-benefit relationship.

Just as **borrowers** with better credit ratings can borrow at lower interest rates, an **insurer** with a stronger credit rating (for example AAA or AA) will be able to better assist a **borrower** with lower interest rates versus an **insurer** with a lower credit rating.

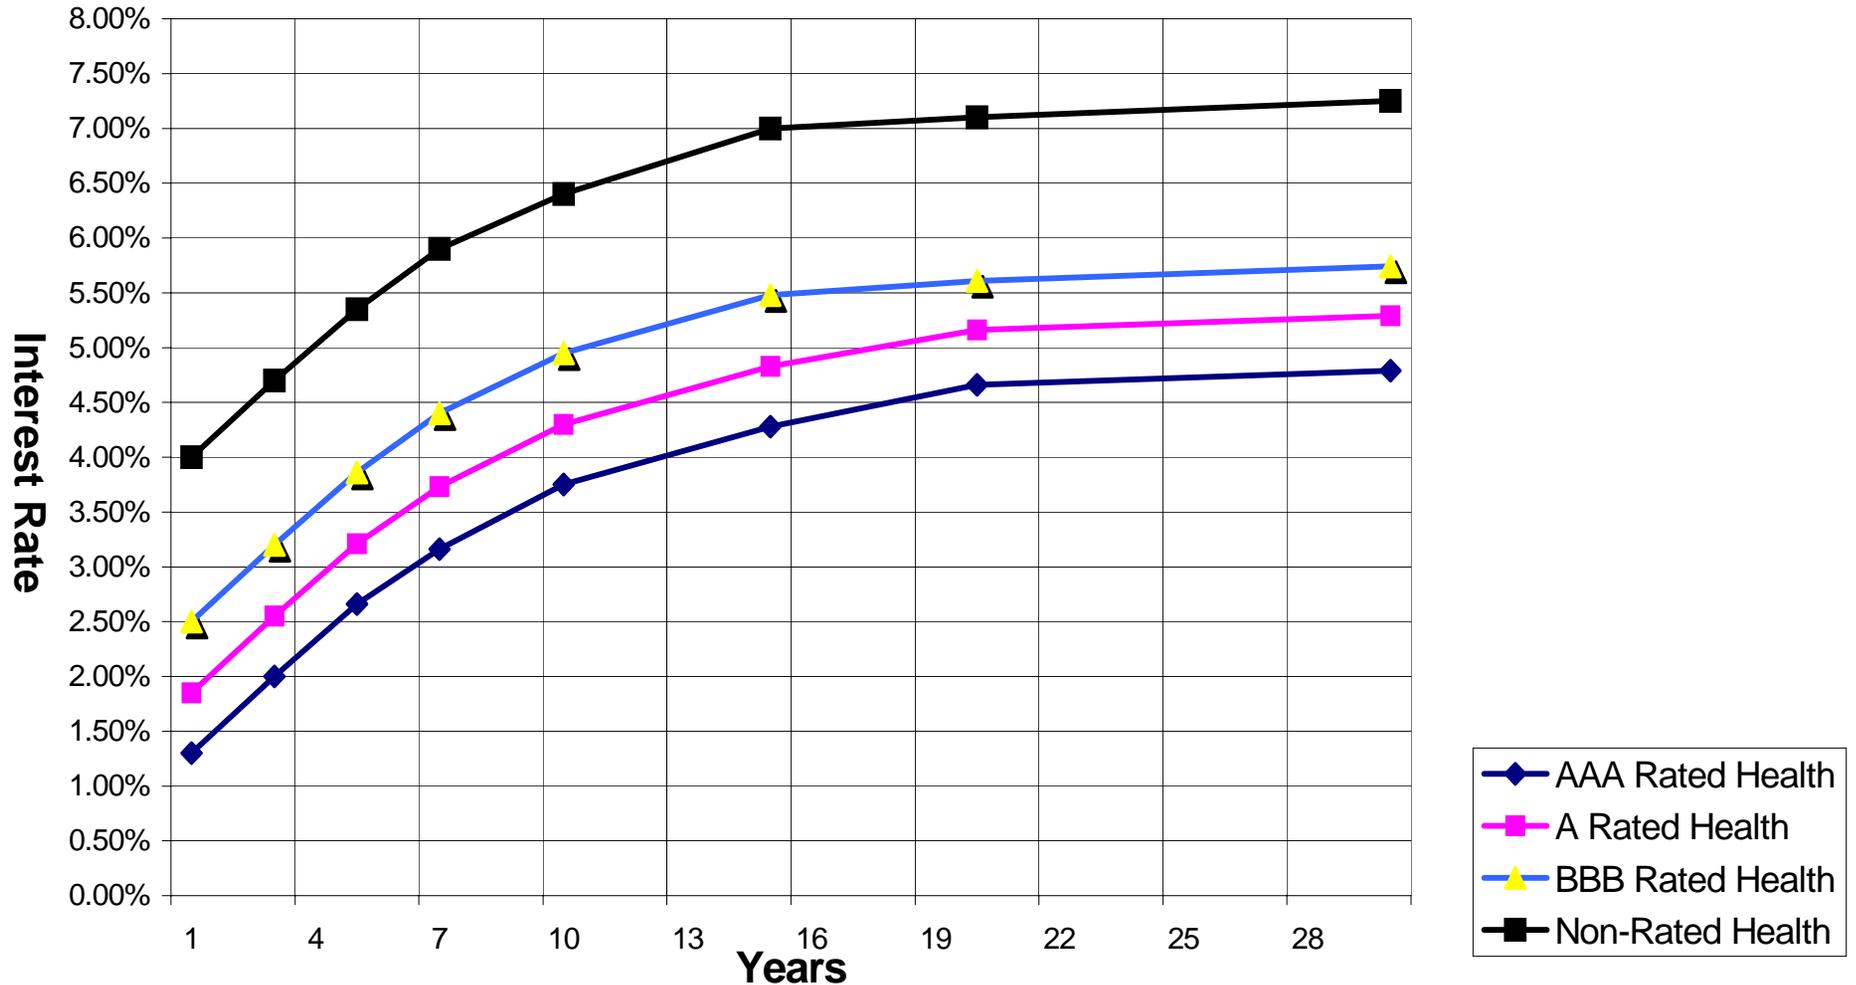

What is “Wrap” Loan Insurance and How is it Used?

Because the State of California backs the loan insurance guarantee, the State’s credit rating is used when determining the interest rate for insured loans.

When the State’s (and the Program’s) credit rating was revised in July 2003 from “A” to “BBB”, interest rates increased for applicants and borrowers on new loans. (Refer to the attached graph as an example.) Some borrowers and financial consultants found a mechanism to augment the Program’s loan insurance by purchasing commercial “wrap” loan insurance. This loan insurance wraps around the Loan Insurance Program (and the State) and guarantees that this Program’s funds (or the State’s) would, if necessary, pay the lenders. Following the economic exchange described above, these commercial loan insurance companies had very strong credit ratings (“AAA” or “AA”), which allowed the borrowers to borrow at even lower interest rates and more than offset the additional “wrap” insurance premium cost.

The State’s credit rating was upgraded on August 25, 2004 to “A”. On May 17, 2006, the State’s credit rating was upgraded again to “A+”.

Notice to Insured Borrowers**

Subject: **Draft 2007 State Plan**

Dear «Title» «LastName»:

The Cal-Mortgage Loan Insurance Division (**Cal-Mortgage**) of the Office of Statewide Health Planning and Development (**OSHPD**) has completed its Draft 2007 State Plan. The Draft 2007 State Plan is available for public review and comment. You may obtain a copy by completing and returning the attached request form to Cal-Mortgage.

The Draft 2007 State Plan is an update of the prior State Plan. The purpose of the State Plan is to provide a frame of reference for OSHPD to assess applications for loan insurance and to focus the California Health Facility Construction Loan Insurance Program on equitable health care accessibility for California.

Written comments on the Draft 2007 State Plan may be submitted to Cal-Mortgage by mail, or send via e-mail to cminsure@oshpd.ca.gov by Friday, June 8, 2007.

After comments are reviewed, a Final 2007 State Plan will be prepared and distributed. A copy of the Final 2007 State Plan may be obtained by checking the appropriate space on the attached request form and returning the request form to Cal-Mortgage.

If you need further information or have questions, please contact George Fribance at (916) 327-2254 or gfribanc@oshpd.ca.gov.

Sincerely,

Carl A. McLaney
Deputy Director
